
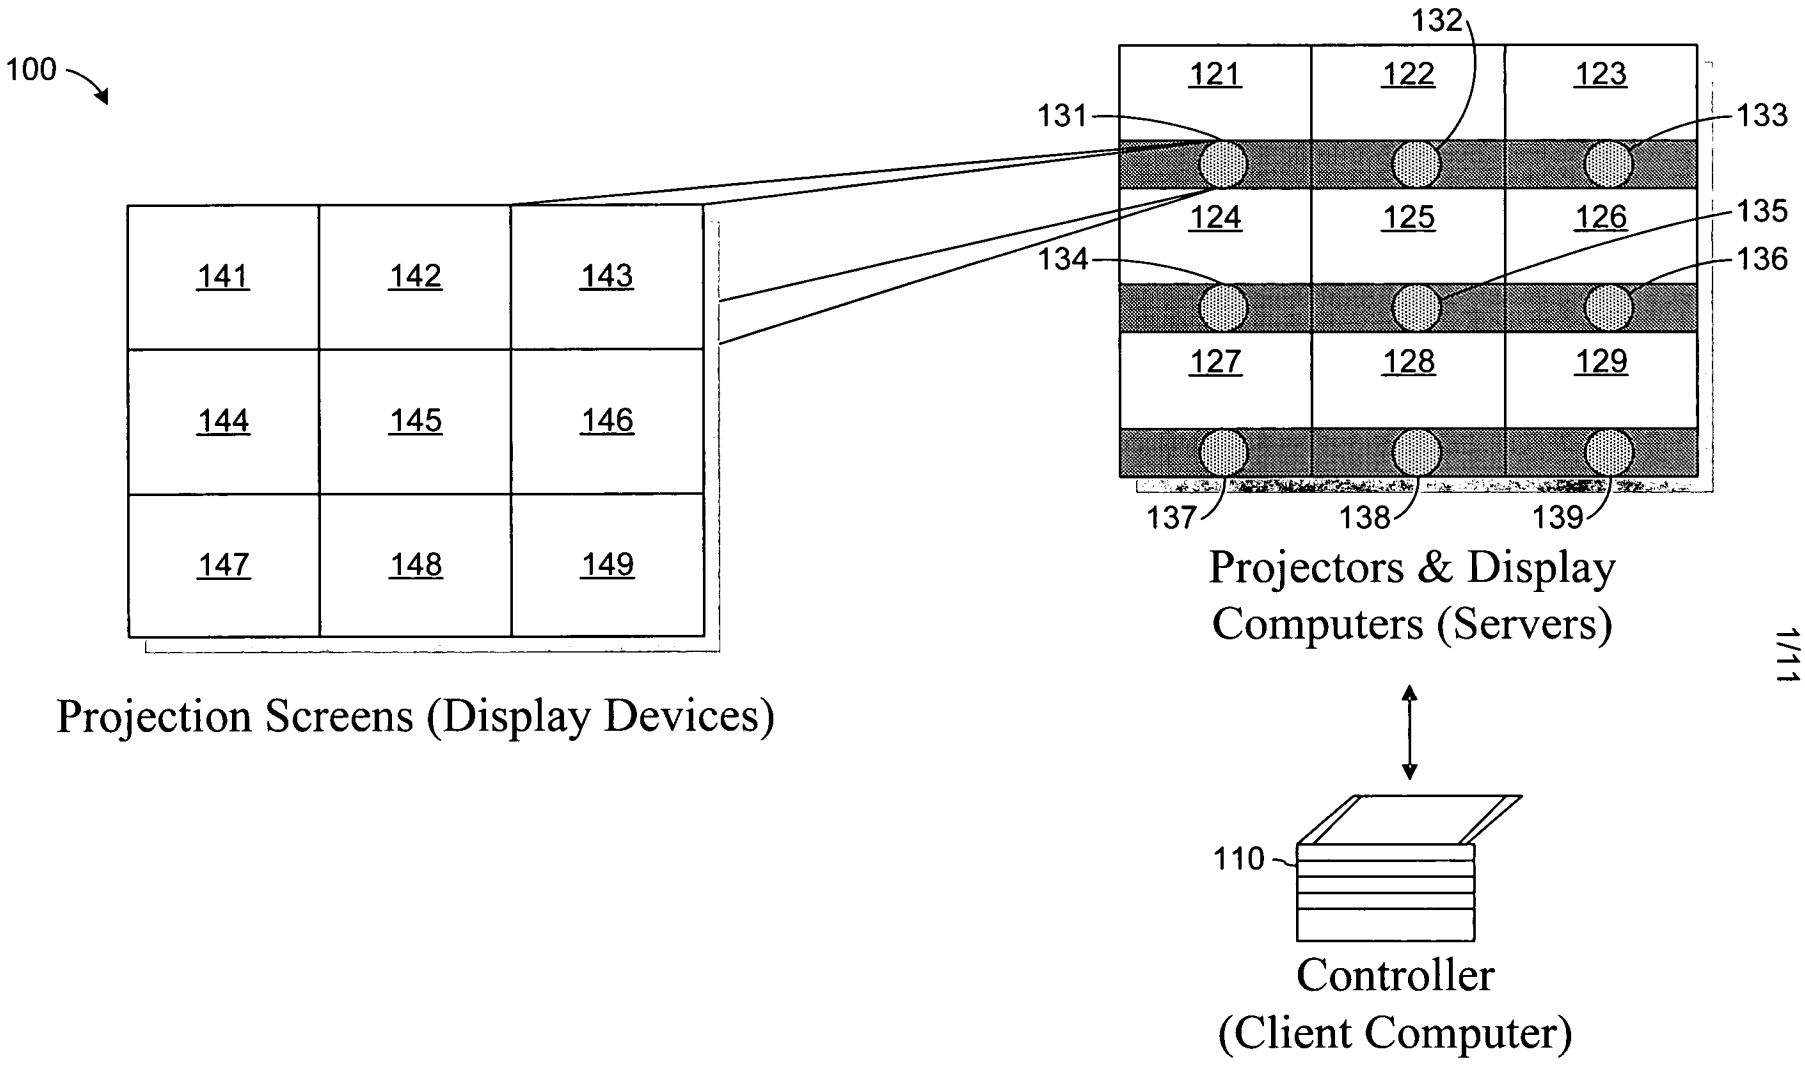

FIG. 1

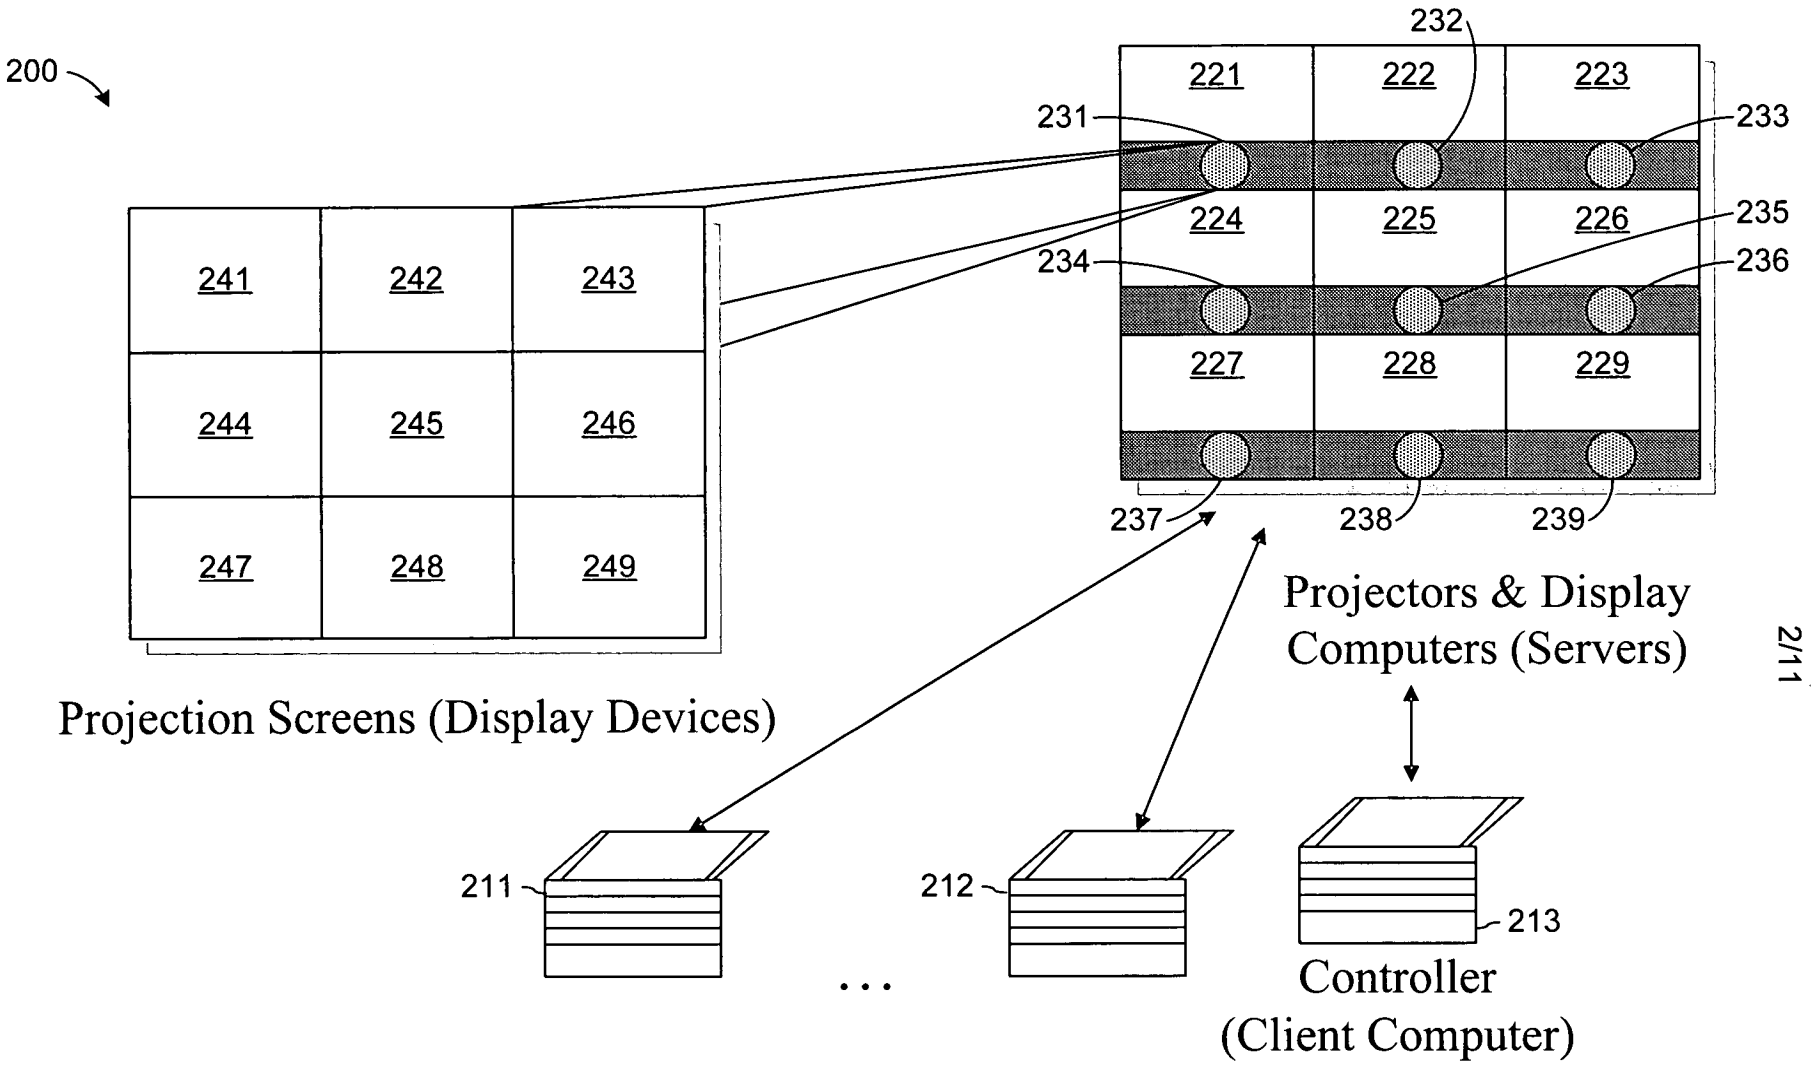

FIG. 2

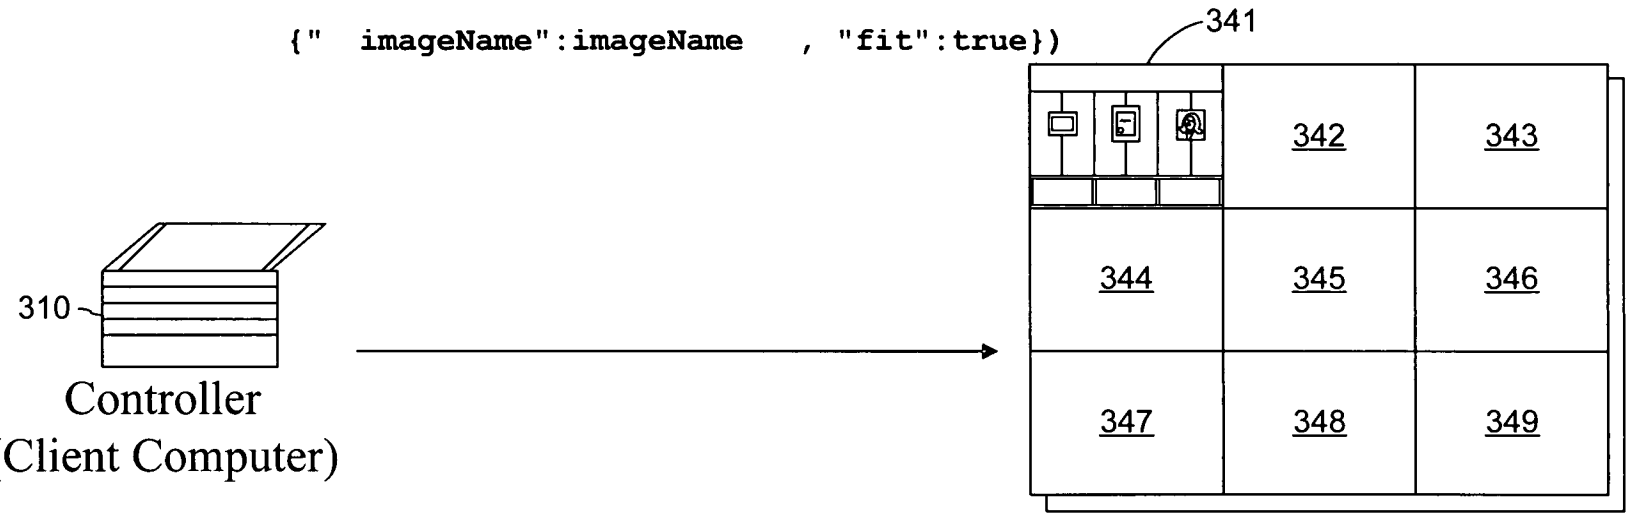
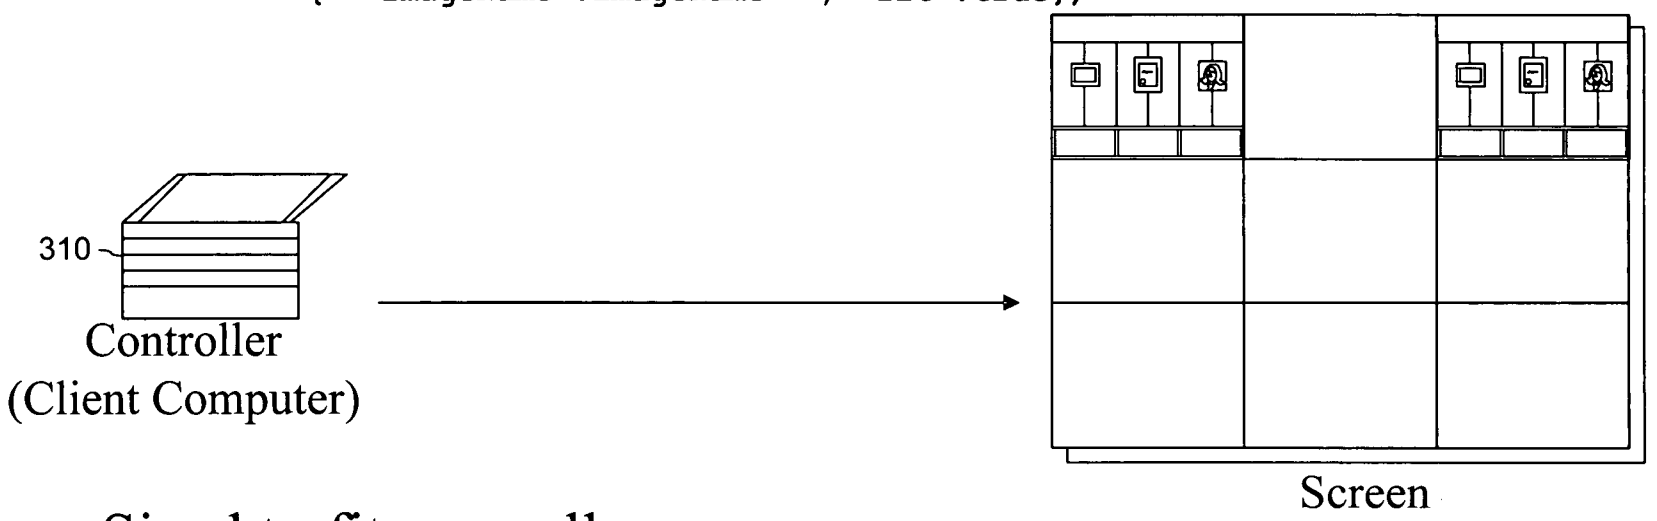
```
w =   image.getIconWidth  (); h =   image.getIconHeight  ()
   self.imageSubset((0, 0, 0, 0), (w, h),
                    {"  imageName":imageName   , "fit":true})
```



- Sized to fit one cell
- Size and position control is done by the client

FIG. 3A

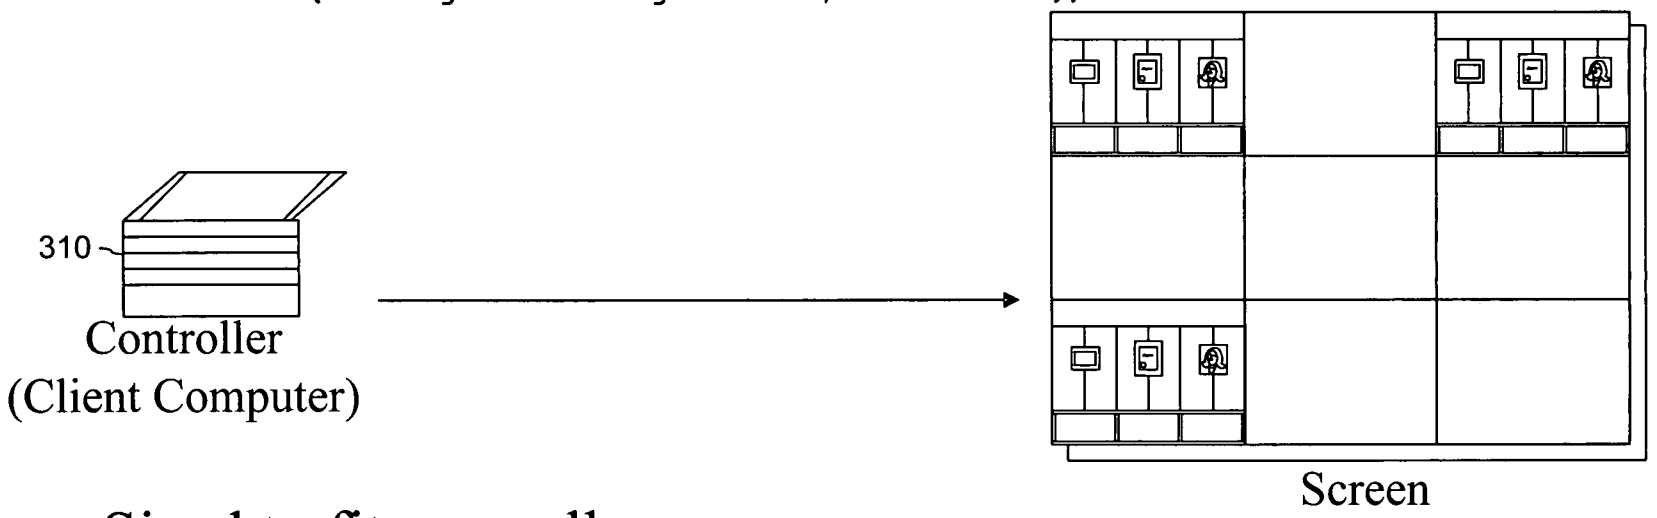
```
w =   image.getIconWidth  (); h =   image.getIconHeight  ()
   self.imageSubset((0, 2, 0, 2), (w, h),
                    {"  imageName":imageName   , "fit":true})
```



- Sized to fit one cell
- Size and position control is done by the client

FIG. 3B

```
w =   image.getIconWidth  (); h =   image.getIconHeight  ()
   self.imageSubset((2, 0, 2, 0), (w, h),
                    {"  imageName":imageName   , "fit":true})
```

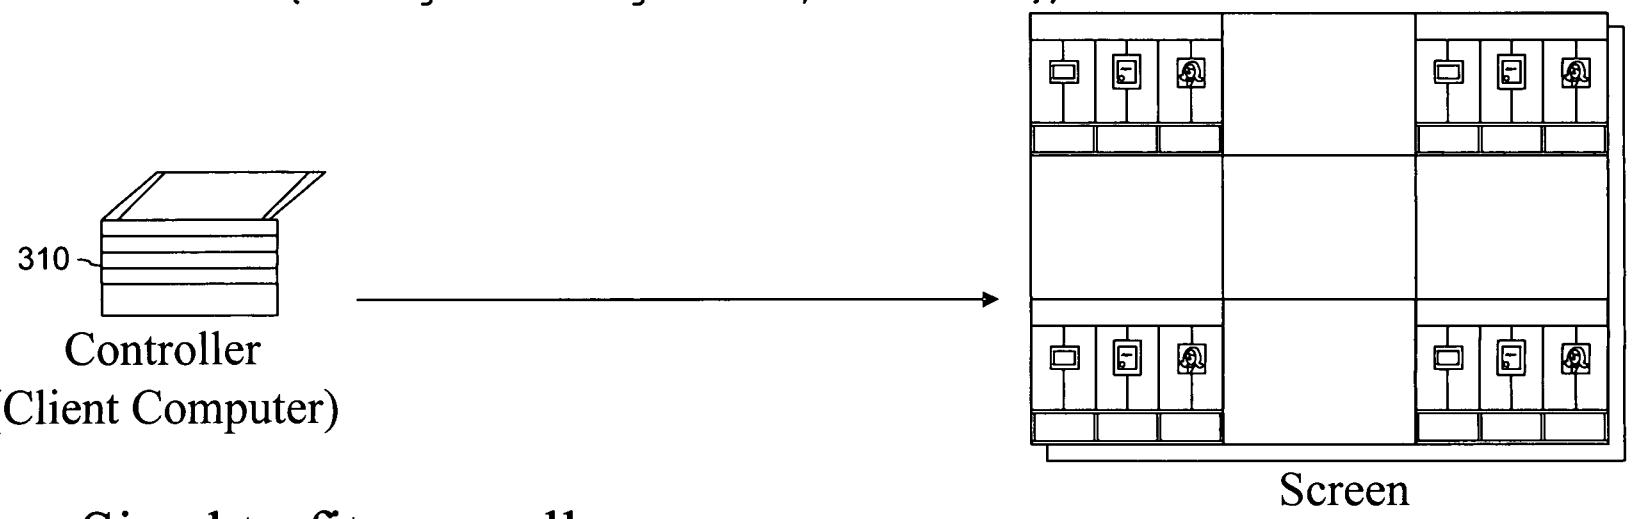


- Sized to fit one cell
- Size and position control is done by the client

FIG. 3C

Size Control –

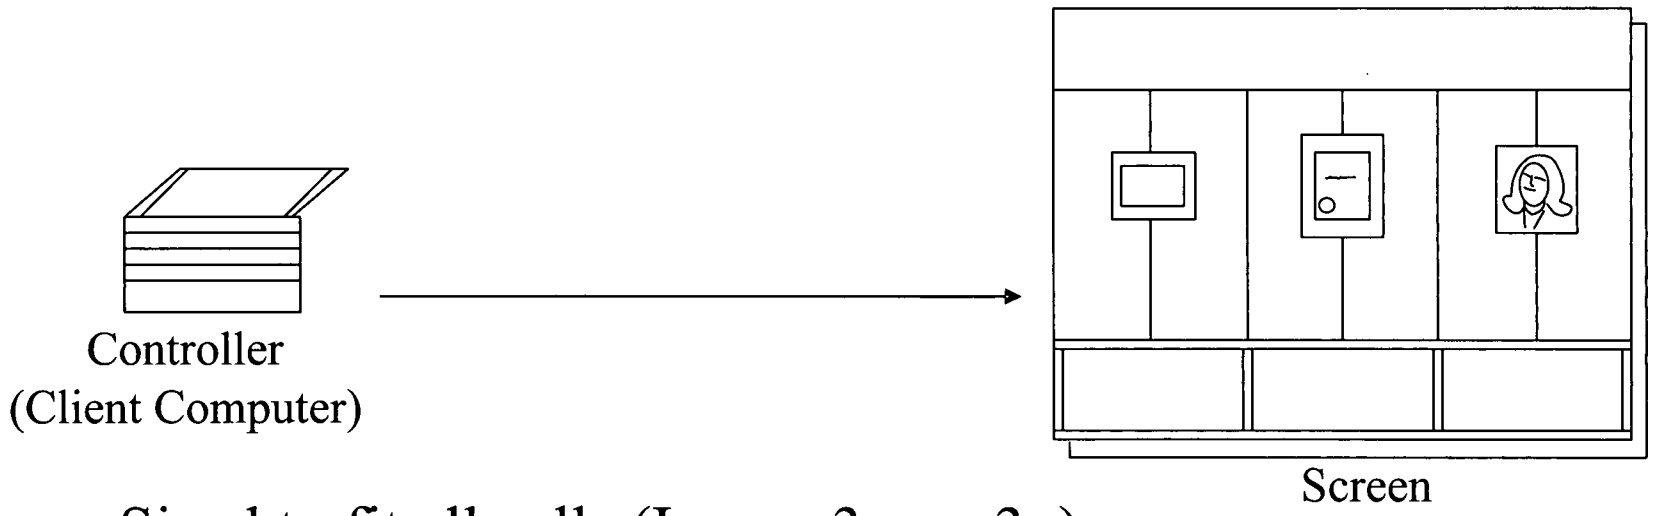
```
w =   image.getIconWidth  (); h =   image.getIconHeight  ()
   self.imageSubset((2, 2, 2, 2), (w, h),
                    {"  imageName":imageName   , "fit":true})
```



- Sized to fit one cell
- Size and position control is done by the client

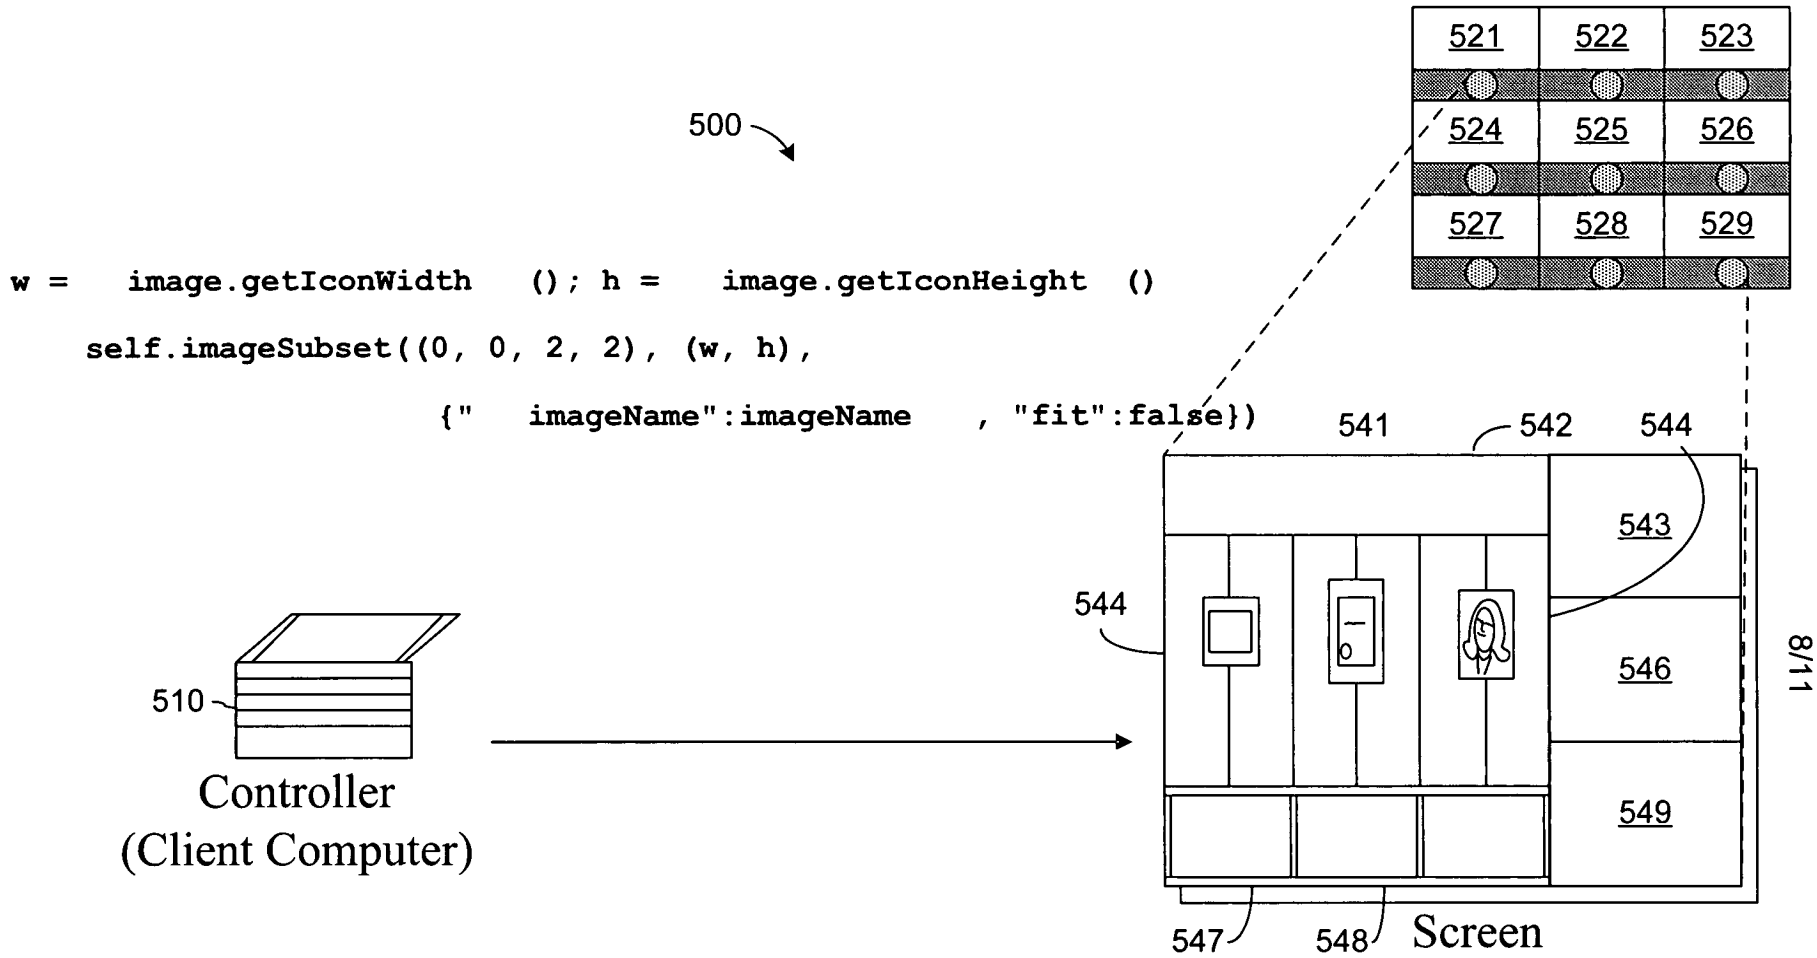
FIG. 3D

```
w =   image.getIconWidth  (); h =   image.getIconHeight  ()
   self.imageSubset((0, 0, 2, 2), (w, h),
                    {"  imageName":imageName   , "fit":false})
```



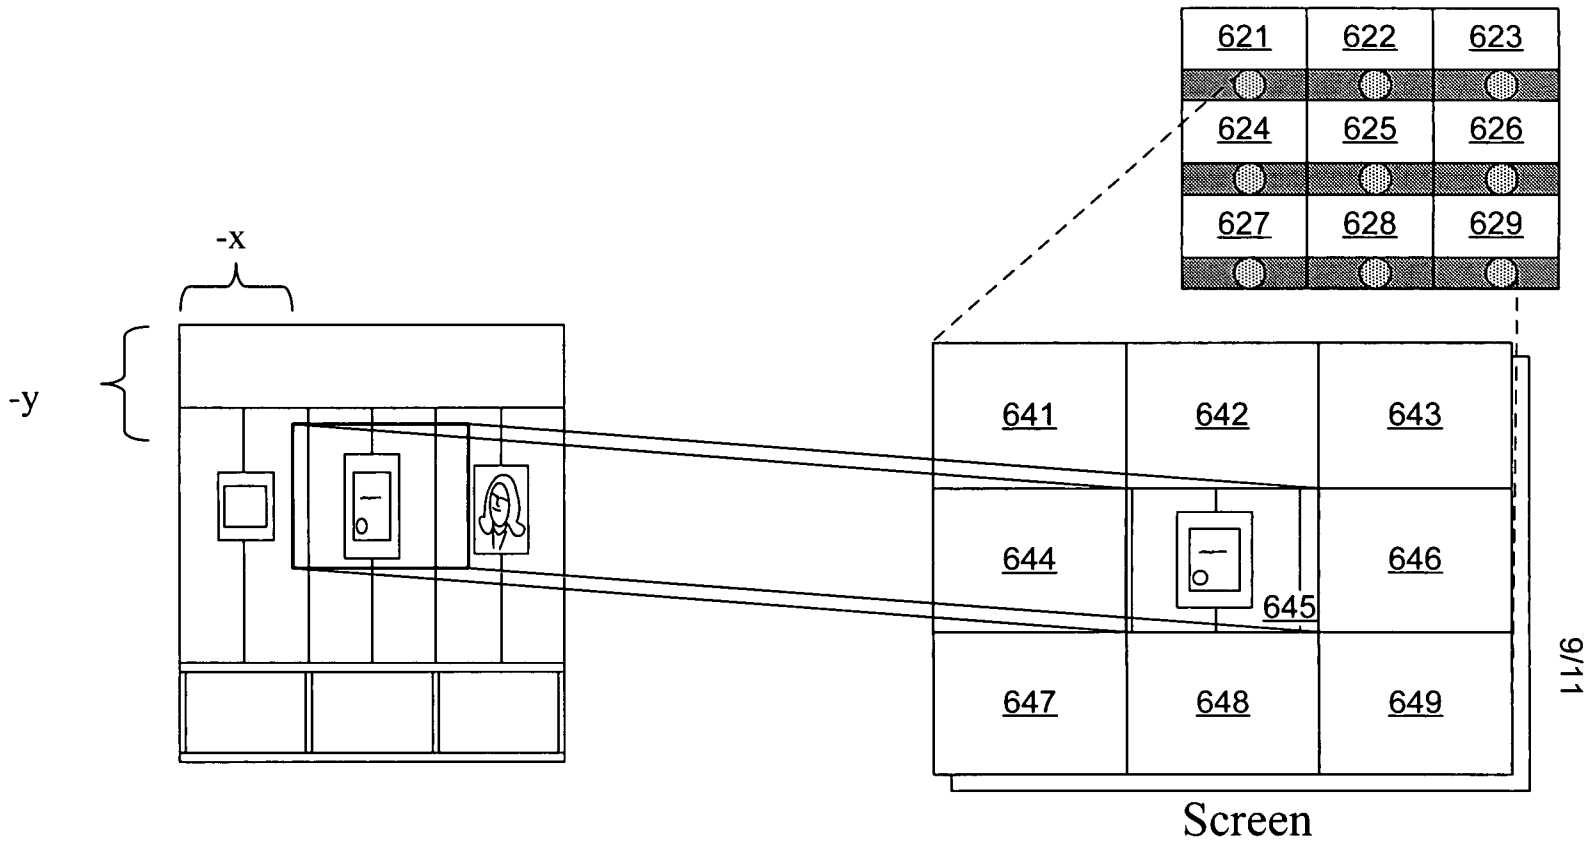
- Sized to fit all cells (I.e., x: 3x, y: 3x)

FIG. 4



- Sized to fit selected cells (that is, x: 2x, y: 3x)

FIG. 5



- Sized to fit selected cells

- Negative offset (-x, -y) equal to cell upper left position in grid

FIG. 6

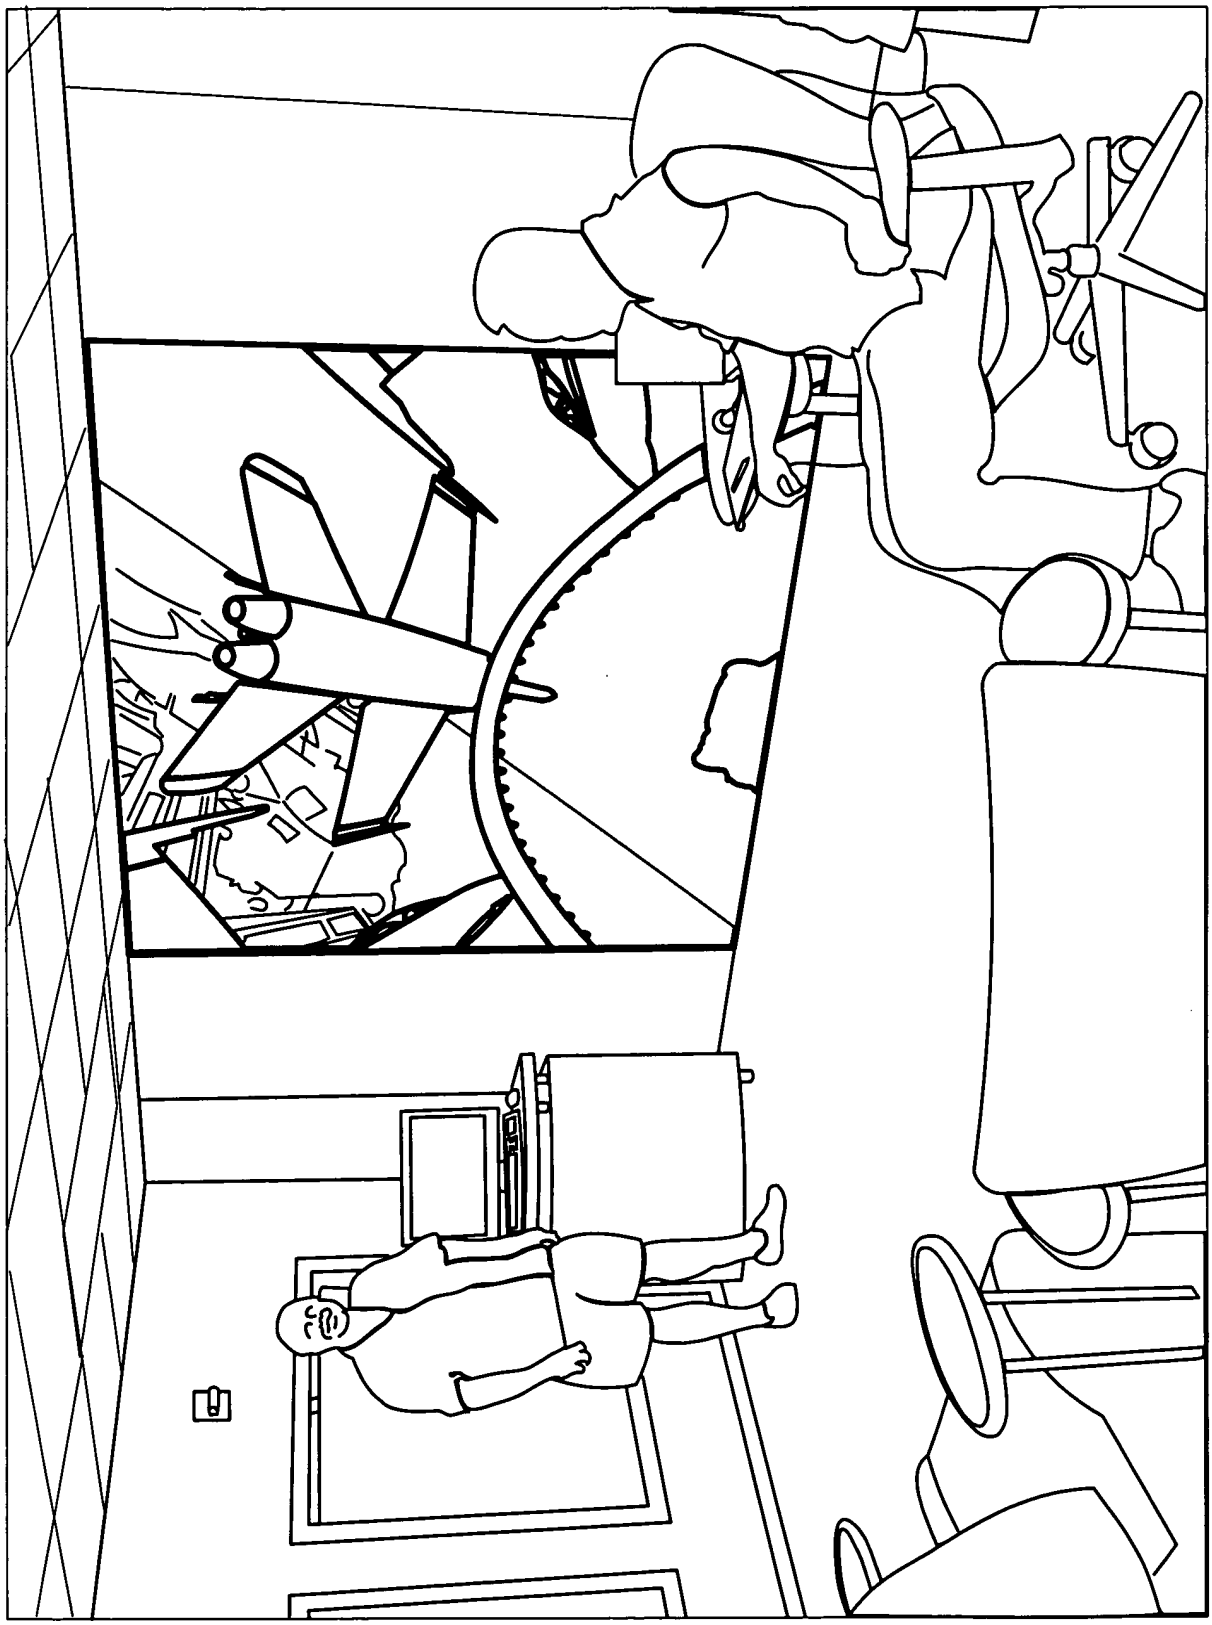


FIG. 7

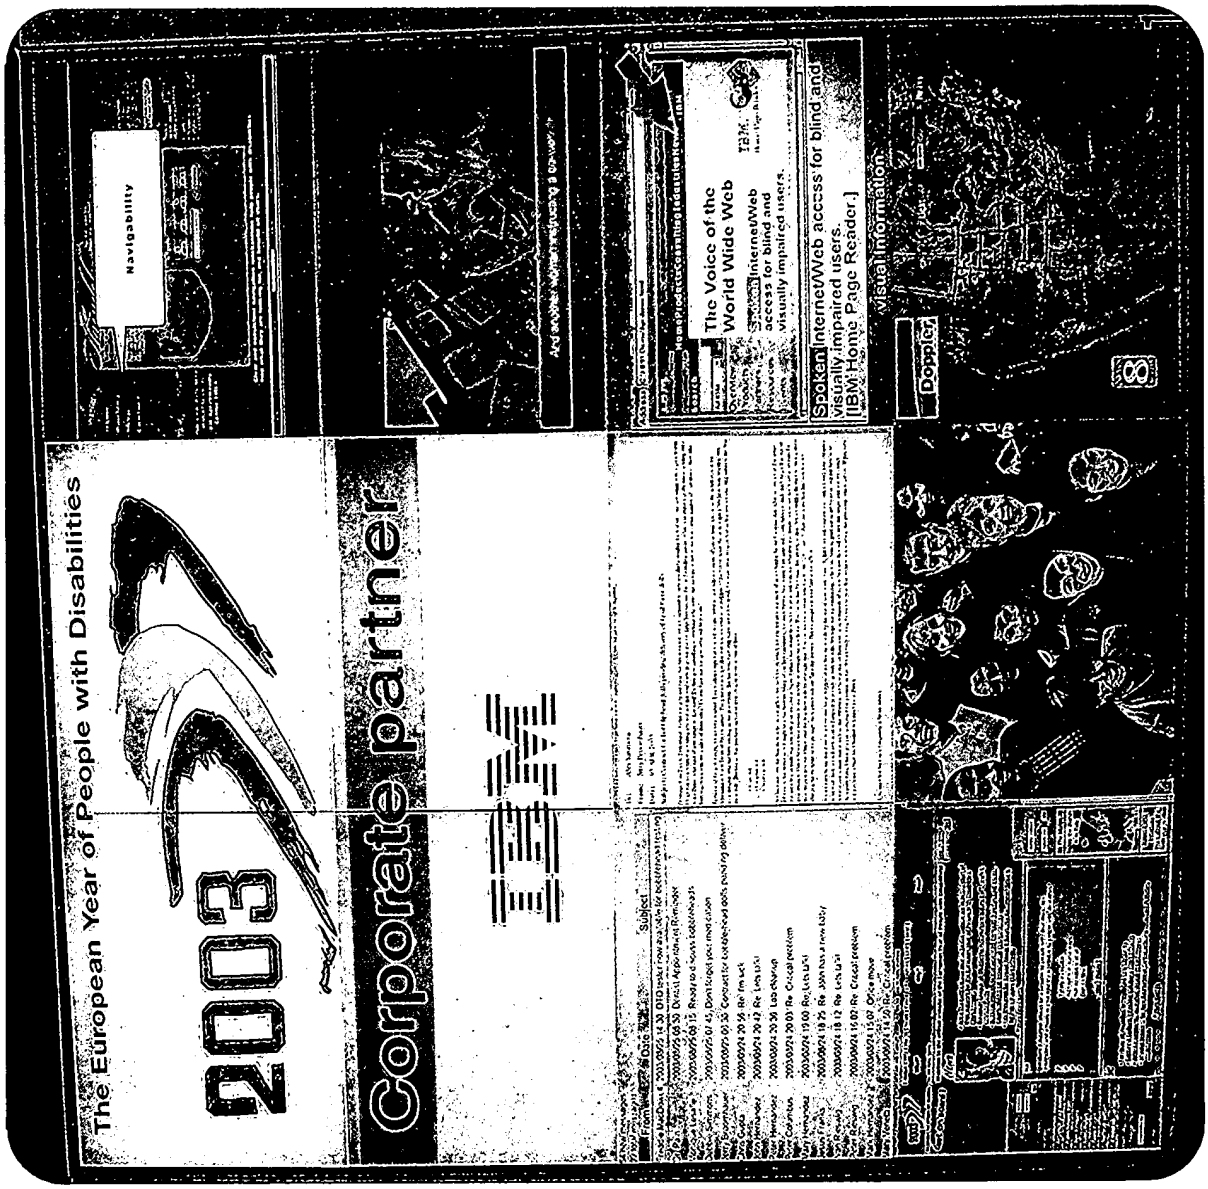

FIG. 8
